Background

In Bangladesh, AI chatbots are transforming customer service by improving response times and efficiency. Businesses are increasingly adopting chatbots to handle customer inquiries, reducing wait times and operational costs. These AI-driven solutions ensure 24/7 support, enhancing customer satisfaction and engagement. This study aims to examine the effectiveness and benefits of AI chatbots in customer service for Bangladeshi businesses.

Objective

The objective of this study is to explore the effectiveness of AI chatbots in enhancing customer service for businesses in Bangladesh. This includes evaluating response efficiency, customer satisfaction, cost reduction, and 24/7 availability. The focus of this study is to identify the challenges businesses face in implementing AI chatbots and propose actionable solutions.

Data Source

This study will need both primary and secondary data sources to evaluate the effectiveness of AI chatbots in enhancing customer service within Bangladeshi businesses.

Variable:

Quantitative Variables

1. Response time of chatbot
2. Customer satisfaction rating
3. Number of queries resolved by chatbot
4. Cost savings from chatbot use–
5. Chatbot usage frequency
6. Conversion rate after chatbot interaction

Qualitative Variables

1. Type of customer queries handled
2. User experience feedback
3. Perceived benefits by businesses
4. Customer trust in chatbot
5. Language preference
6. Challenges faced in chatbot implementation
